## **DETAILED ACTION**

## Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 32-36, drawn to a reflective polarizer wherein the birefringent bodies are made of fibers, respectively, and a shape of a cross section of each fiber perpendicular to the major axis direction thereof is polygonal.

Group II, claim(s) 37-42, 44, 47, 50, 53 and 56, drawn to a reflective polarizer wherein, in the cross section perpendicular to the major axis direction thereof, the shape of each birefringent body is substantially a circle, and a triangle defined by connecting centers of three circles in direct contact in the cross section has at least two sides substantially equal to each other in length.

Group III, claim(s) 43, 45-46, 48-49, 51-52, 54-55, drawn to a laminated optical member comprising a reflective polarizer, wherein the reflective polarizer is laminated with an optical layer having another optical function.

- 2. Claim 1 links Groups I-III. Claims 30 and 31 will be examined along with the elected invention of Groups I-III.
- 3. The inventions listed as Groups I-IV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: the common technical feature in all groups is a reflective polarizer comprising: plural birefringent bodies each having one of a polygonal prism and a circular cylinder whose cross section perpendicular to a major axis direction thereof has a shape of polygon or substantially circular, the shape of the cross section having an aspect ratio of not less than 2, and the birefringent bodies having a refractive index difference of not less than 0.05 between a refractive index component in the long axis direction and a refractive index component in a minor axis direction of the birefringent bodies, wherein the plural birefringent bodies are dispersedly arranged substantially in one direction in a support

Art Unit: 2872

medium, and wherein, where the shape of the cross section perpendicular to the major axis direction of the birefringent bodies is substantially circular, in the cross section, any one of the plural birefringent bodies is in contact on a side face thereof with each of at least two other birefringent bodies in contact on a side face thereof with each other. These elements cannot be a special technical feature under PCT rule 13.2 because the device is shown in the prior art. Japanese Patent Application 2003-227923 teaches a reflective polarizer substantially as claimed in claim 1.

4. A telephone call was made to Sunhee Lee on 7/14/08 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JADE CALLAWAY whose telephone number is

Application/Control Number: 10/565,191 Page 4

(571)272-8199. The examiner can normally be reached on Monday to Friday 7:00 am -

4:30 pm est.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Stephone B. Allen can be reached on 571-272-2434. The fax phone

number for the organization where this application or proceeding is assigned is 571-

273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
